Objective:

To analyze financial performance by evaluating revenue, cost, and profit trends over time, in order to identify growth opportunities, cost inefficiencies, and support data-driven decision-making.

KEY INSIGHTS

- **Strong revenue (RM12M) but low profit (RM839K)**
  Profit margin ~**7%**, indicating **margin compression** despite healthy sales
- **Operational costs increased significantly (~+15–20%)**
  Largest cost component and **main driver reducing profitability**
- **Marketing spend shows weak ROI (~low conversion impact)**
  High spend without proportional revenue growth suggests **inefficient allocation**
- **Uneven regional contribution (~60% revenue from top regions)**
  Heavy reliance on a few regions, while others remain underutilized
- **Monthly fluctuations observed (~±10–15% variance)**
  Indicates **seasonal demand impact** affecting revenue and profit stability

Overall:

- Business facing **margin compression** as costs outpace revenue growth
- Profit growth is **not keeping pace with revenue**, limiting financial performance

Business Recommendation

- **Optimize operational costs** (target: reduce by 10–15%)
  - Streamline processes, eliminate inefficiencies, and control overhead
- **Improve marketing ROI** (target: increase conversion efficiency)
  - Reallocate budget to high-performing channels and cut underperforming campaigns
- **Leverage high-performing regions** (focus on top 2–3 regions)
  - Scale successful strategies while improving penetration in weaker markets
- **Enhance demand forecasting** (reduce volatility by ~10%)
  - Align inventory, staffing, and campaigns with seasonal patterns
- **Shift to profit-focused KPIs**
  - Track **profit margin, cost ratio, and ROI**, not just revenue

KEY METRICS

- Total Revenue – Sum of all sales generated
- Total Cost – Total operational or production cost
- Total Profit – Revenue – Cost
- Profit Margin (%) – Profit / Revenue
- Monthly Growth (%) – Month-over-month revenue change
